

AIDD 30-Day Challenge — Task 1

Time: 1 Hour |

Marks: 10 |

Deadline: 48 Hours

Class Slot: Friday — 6:00 PM to 9:00 PM

Instructor: Sir Hamzah Syed

Prepared by :Unzila Moin

Q1.What does AI-Driven Development mean to you?

Ans:For me, AI-driven development feels like having a helpful friend who's good at coding.

- 1.It helps me understand complex things faster, especially when I get stuck.
- 2.AI saves my time by doing repetitive or boring tasks quickly.
- 3.I can test my ideas instantly instead of waiting or guessing.
- 4.It gives me confidence because I know I'm not working alone — AI guides me.
- 5.I learn new coding styles and better ways to write clean code.
- 6.Even if I'm not perfect at programming, AI helps me build real projects
- 7.It makes development fun, not frustrating.
- 8.I can focus more on creativity and less on typing long code.

Q2.How do you see the future of Human–AI Collaboration in software development?

Ans: I think humans and AI will work more like teammates than separate tools.

- Developers will focus more on ideas, creativity, and problem-solving while AI handles most of the routine coding.
- Learning to “talk to AI” (prompting) will become just as important as learning programming languages.
- Projects will be built faster because AI will take care of debugging, documentation, and testing.
- Beginners like me will be able to build advanced apps without needing years of experience.
- AI will help explain code in simple ways, so learning will become easier and less stressful.
- Humans will still make the final decisions — AI will help, but not replace us.
- Overall, I see the future as more collaborative, where humans bring creativity and judgment, and AI brings speed and accuracy.
